Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PREFACE.

THE IMPROVED READY RECKONER AND LOG-BOOK contains tables showing the value of any number of pounds, gallons, yards, feet, etc. of any article, from one to a thousand, at from one-quarter of a cent to ten dollars each, so arranged that a person may, by looking at the head of the page to find the given price, and at the column on the side for the number wanted, see at a glance the amount of value required. As an example, suppose you wish to know what 35 pounds of tea would cost at 49 cents per pound. By referring to page 71 and following the left-hand column until you reach 35, opposite this number you will find \$17.15, the amount required.

It also contains carefully-prepared Tables of Board, Scantling, Plank, and Log Measures, as well as methods for calculating the measurement of Stonework and Masonry; Tables of Weights

and Measures, Measurement of Grain and Hay; Tables of Wages and Board by the Day and Week; Business Laws in daily use, Business Forms, Interest Tables, Rates of Postage, and much more information of great value to the merchant, mechanic, farmer, lumberman, and, in fact, to all persons, employer as well as employed. The Publishers believe they have presented in this book more useful matter for all classes than is to be found in any similar volume of the same size.

Interest at any Rate per Cent.

INTEREST.

An easy method of calculating the interest on any amount for any number of days, at six per cent.

RULE.—Multiply the number of dollars by the number of days, and divide by 60; the result is the interest at 6 per cent. in cents.

EXAMPLE.—What is the interest of \$78 for 90 days at 6 per cent.?

SOLUTION.— 78

$$\begin{array}{r} 90 \\ 60 \overline{) 7020} \end{array}$$

117 cents — \$1.17 interest.

If any other rate than 6 per cent. is required, the following rule will apply:

RULE.—Multiply the number of dollars by the number of days, and this result by the given rate, and divide by 360; the result is the interest in cents.

EXAMPLE.—What is the interest of \$125 for 54 days at 8 per cent.?

SOLUTION.—125

$$\begin{array}{r} 54 \\ 500 \\ 625 \\ 8750 \\ 8 \end{array}$$

360)54000(150 cents — \$1.50 interest.

$$\begin{array}{r} 360 \\ 1800 \\ 1800 \end{array}$$

A note made on Sunday is void.

Contracts made on Sunday cannot be enforced.

A note by a minor is void.

A contract made with a minor is void.

A note obtained by fraud, or from a person in a state of intoxication, cannot be collected.

A receipt for money is not always conclusive.

The acts of one partner bind all the rest.

The maker of an "accommodation" bill or note (one for which he has received no consideration, having lent his name or credit for the accommodation of the holder) is not bound to the person accommodated, but is bound to all other parties precisely as if there was a good consideration.

Checks or drafts must be presented for payment without unreasonable delay.

If the drawee of a check or draft has changed his residence, the holder must use due or reasonable diligence to find him.

If one who holds a check as payee or otherwise transfers it to another, he has a right to insist that the check be presented that day, or, at farthest, on the day following.

A note indorsed in blank (the name of the indorser only written) is transferable by delivery the same as if made payable to bearer.

If the time of payment of a note is not inserted, it is held payable on demand.

An indorsee has a right of action against all whose names were on the bill when he received it.

If the letter containing a protest of non-payment be put into the post-office, any miscarriage does not affect the party giving notice.

If two or more persons as partners are jointly liable on a note or bill, due notice to one of them is sufficient.

If a note or bill is transferred as security, or even as payment of a pre-existing debt, the debt revives if the bill or note be dishonored.

All claims which do not rest upon a seal or judgment must be sued within six years from the time when they arise or are revived, except in Quebec, which is five years.

Part payment of a debt which has passed the time of statutory limitation revives the whole debt, and the claim holds good for another period of six years from the date of such partial payment.

If when a debt is due the debtor is out of the Province, the "six years" do not begin to run until he returns. If he afterward leave the Province, the time forward counts the same as if he remained in the Province.

An oral agreement must be proved by evidence. A written agreement proves itself. The law prefers written to oral evidence, because of its precision.

Remarks.—The above are the usual form of notes. A note on demand, as No. 1, is due at any time when demanded. A note payable to S. H. or order, may be sold or negotiated if S. H. writes his name upon the back, and if payable to S. H. or bearer, it can be sold without being endorsed, and will be good to the holder. In the State of Pennsylvania the words "*without defalcation*" are inserted after dollars.

When two or more persons sign a note "severally and jointly," they are each responsible for its payment. The words "*value received*" should be written on a note to make it valid.

A person endorsing a note, or writing his name across the back, becomes responsible for its payment. If, however, the person thus endorsing is not notified when the note becomes due of its non-payment by the drawer, he can no longer be held responsible for its payment. A partial payment of a note should always be endorsed on the same.

BOARD MEASURE.

BOARDS are sold by the square foot surface, one inch in thickness. If cut thinner, they count the same as if an inch thick.

To ascertain the number of square feet in a board, multiply the width in inches by the length in feet, and divide the product by 12; the quotient is the number of feet in the board, and the remainder is the odd inches. Six inches and over, remainder, are counted an additional foot. For example, measure a board 22 inches wide by 19 feet long, as below :

Multiply .. 22 .. the width in inches,
by .. 19 .. length in feet.

Showing 34 feet 10 inches in the board, which counts 35 feet.

THE MEASUREMENT OF TIMBER OR SCANTLING.

NOTE.—The following valuable tables are taken from *Day's Ready Reckoner*, by permission of the publishers, Dick & Fitzgerald, of New York.

SCANTLING, or Timber for building, is sold by the square foot of inch-board measure. Thus a cubic foot of scantling, which is a foot wide, a foot thick, and a foot long, contains twelve feet measurement. To ascertain the square feet in a piece of scantling of any length, width, and thickness, multiply the width in inches by the thickness in inches; then multiply the product of these figures by the length in feet, and divide the second product by twelve; the quotient is the number of feet, and the remainder (if any) is the odd inches. Six inches and over are usually reckoned as an extra foot.

In measuring the length of a piece of timber the lumberman counts even feet only. Unless the length is full ten inches or more over an even number of feet, the excess is not counted; but ten inches over are counted as a full foot. In marking the contents of a piece of timber when it runs over measure, the lumberman usu-

THE MEASUREMENT OF TIMBER.

ally places a mark at the spot where the measurement ends. The marks are made on one end of the stick with Roman capital letters instead of figures, as XXI for 21, XVIII for 18, and so on.

EXAMPLE.—Suppose a stick of timber to be 11 inches in width, 9 inches thick, and to measure 27 feet in length:

Multiply.....11...the width
by..... 9...the thickness.
Product.....99...by which
multiply.....27...the length in ft.

Divide 198
this product by 12)2673
Quotient...222...9 remainder.

The quotient is the number of square feet (board measure), the 9 remainder being odd inches. As six inches and over are counted a foot, 223 feet are the contents of the stick.

PLANK MEASURE.

BOARD MEASURE is the basis of plank measure; that is, a plank 2 inches thick and 13 feet long and 10 inches wide contains evidently twice as many square feet as if only one inch thick; therefore, in estimating the contents of any plank we first find the contents of the surface, taken *one* inch thick, and then multiply this product by the thickness of the plank in inches.

EXAMPLE.—Suppose we wish to ascertain the contents of a plank 6 feet long, 12 inches wide and $2\frac{1}{2}$ inches thick. First multiply the width in inches (12) by the length in feet (6), and divide the product by 12. This will give the contents of a board 1 inch thick, 12 inches wide and 6 feet long. If the last product be multiplied by $2\frac{1}{2}$, the result will be the contents of a plank 6 feet long, 12 inches wide and $2\frac{1}{2}$ inches thick.

Thus, 12 width in inches.
 6 length in feet.

12)72

$2\frac{1}{2}$ thickness in inches.

13 $\frac{1}{2}$ contents in feet, board
 measure.

In the following table less than half a foot is not counted, and half a foot or over, and less than one foot, is called 1 foot; which is quite sufficient for all practical purposes.

CUBIC MEASUREMENT OF TIMBER

HEWED timber for framing buildings and for building bridges, docks, ships, etc., is sold by the solid cubic foot, and the contents of each stick, when measured by the lumberman, is marked on the butt with a broad-axe in Roman capital letters. For example, a stick containing nineteen feet is marked **XIX**; one of twenty feet, **XX**; twenty-one feet, **XXI**, and so on. A cubic foot is a measurement one foot long by a foot thick each way, or the equivalent thereof; hence a stick of timber a foot square will count one cubic foot to each foot of its running length. In reckoning the cubical contents of a stick of timber, if it should run less than half a foot (or $\frac{1}{2}$) over an even number of feet, the excess is not counted; but a full half, or any fraction above it, is counted an extra foot. To ascertain the contents proceed as follows: Measure the thickness of the stick each way in inches, and multiply one by the other: then multiply the product by the length in feet. Divide the second product

by 12, and then divide the quotient by 12. The second quotient is the number of cubic feet. For example: Take a stick of timber of the size 18 by 14 inches and 41 feet long.

To bring in and include the fractions of a foot, add two ciphers to this second product, and then divide by 12, thus:

12)746200

12)62183 Quotient.

5181 Second Quotient.

The two first figures of the second quotient (51) are the number of feet in the stick, and the two last figures (81) represent the fraction—viz. $\frac{81}{100}$. Hence the stick contains 52 cubic feet—half a foot ($\frac{40}{100}$) and over counting an extra foot.

LOGS REDUCED TO
SQUARE TIMBER.

To reckon the contents of a round log in cubic feet of square timber, first reduce it to square timber, thus: Measure the diameter (or thickness) at each end in inches; add these measurements together, and divide the sum-total by 2; the quotient is the average diameter. One-third of this diameter is allowed for the chips or slabs. To deduct this third, divide the number of inches diameter by 3, and subtract the quotient from it; the remainder is the proper diameter for measurement. The thickness of the log is generally counted in even inches; and one-third of an inch excess, or upward, is added as an extra inch. After getting the square of the log in manner above described, the number of cubic feet in it is reckoned the same as in square timber (see page 222). But as in the reduction of logs fractions of inches often have to be reckoned, an example may be useful for a perfect understanding of it.

EXAMPLE.—Suppose a round log to be

LIMS REDUCED TO SQUARE TIMBER.

85 feet long, 24 inches thick at the butt
and 19 inches thick at the top:

Add.....24...

and.....19...the two diameters.

Sum-total.....43...to which add two
iphers to include the fractions, and then
divide by.....2)43.00

Deduct $\frac{1}{2}$ for slabs 3)21.50 averaged diameter.

7.17

True diameter.....14.33...or $14\frac{1}{2}$ inches.

Reduce this to thirds, thus: Three times
14 is 42, and the odd one makes 43 thirds.

Multiply.....43

by.....43

129

172

Total.....1849...which represents
ninths of inches. Add two ciphers to in-
clude the fractions, and then, to reduce to
inches, divide by 9:

9)1849.00

205.44

Multiply by.....35...the length of
the log.

102720

61632

Divide by.....12)7190.40

Divide by.....12) 599.20

Cubic feet.....49 $\frac{1}{100}$ counting 50 feet.

CUBIC MEASUREMENT OF ROUND TIMBER.

THE following may properly be called **LOG TABLES**, as they give the number of solid or cubic feet in logs of different lengths and thicknesses. They apply to all kinds of round timber sold by the solid foot.

To reckon the number of cubic or solid feet in any log, ascertain its average thickness in manner given on page 233. Multiply this diameter in inches by an equal sum; then deduct one-fourth from the product, and add 5 per cent. to the remainder. Multiply the sum-total by the length of the log in feet, and divide the product by 12; then divide the quotient by 12, as in square timber, described on page 222. The second quotient is the number of solid (or cubic) feet and fractions thereof which the log contains.

EXAMPLE.—Suppose a log 23 feet long to be 29 inches thick at the butt and 26 inches thick at the small end:

MEASUREMENT OF STONE-WORK.

Stone masonry is usually estimated by the perch.

A *perch* of stone is 16½ ft. long, 1 ft. high and 1½ ft. thick, and is equivalent to 24½ cu. ft.

The following is the common rule to find the contents of a wall or other stone-work :

RULE.—*Find the contents in cubic feet, and divide by 24.75.*

MEASUREMENTS OF GRAIN AND HAY.

Grain is usually measured in the United States by the bushel.

The standard bushel is 2150.42 cu. in.

Since a cubic foot is 1728 cu. in., a cubic foot is nearly .8 of a bushel; hence the

RULE.—*To find the contents of any quantity of grain in bushels, find the contents in cubic feet, and multiply by .8.*

For the same reason any number of bushels increased by ¼ the number will equal the number of cubic feet.

Heaped measure is regarded as containing ¼ more than *stricken* or *even measure*.

NOTE.—The results under this rule are only approximately correct.
